Pavan Kumar

Application Developer

pavankumaranjuri@gmail.com | (913) 225-0967 | Kansas City, MO | linkedin.com/in/pavan-kumar-baa364307

SUMMARY

Application Developer with 3+ years of experience designing, developing, and deploying scalable enterprise web applications using Java 8/11/17, Spring Boot, Spring MVC, Spring Security, Spring Cloud, Hibernate, JPA, and Spring Batch on the backend, and React with TypeScript, HTML, Tailwind CSS, and JavaScript on the frontend. Skilled in designing RESTful APIs with JWT and OAuth 2.0 security, integrating relational (SQL Server, MySQL, Oracle DB) and NoSQL (MongoDB) databases, using Redis for caching, and building event-driven microservices with Apache Kafka. Experienced in cloud deployment on AWS (EC2, S3, CloudWatch) and Microsoft Azure with Kubernetes orchestration, Terraform for infrastructure-as-code, CI/CD automation, and testing with JUnit. Proficient in production monitoring using Dynatrace, Grafana, Splunk, and the ELK Stack. Strong collaborator in Agile/Scrum environments, tracking work in Jira, with a proven record of delivering high-quality, production-ready code end-to-end.

EXPERIENCE

Application Developer II | ***Capgemini*** *July 2025 – Present*

- Designed and developed a microservices-based Employee Self-Service Portal backend using Java 17, Spring Boot, and Spring MVC implemented 40+ RESTful APIs with Spring Security, JWT, and OAuth 2.0 authentication for role-based access control across HR, leave, attendance, and payroll modules.
- Architected microservices using Spring Cloud components for service discovery, configuration management, and inter-service communication; used JPA with entity mappings, custom repositories, and stored procedures for data operations.
- Built responsive front-end interfaces using React, TypeScript, Tailwind CSS, HTML, and JavaScript created reusable components, form validation, state management, and API integration through Axios, reducing initial page load time by 35%.
- Integrated backend services with MySQL through JPA using optimized queries and indexes to improve query performance by up to 40%; implemented Redis caching layers to reduce API response time by 45% on high-read endpoints.
- Implemented event-driven communication between microservices using Apache Kafka for asynchronous processing of leave notifications, attendance sync, and payroll events improving decoupling, throughput, and system reliability.
- Implemented resilience and distributed-transaction patterns across microservices using Resilience4j Circuit Breaker to gracefully handle downstream service failures with fallback methods and retries, and the Saga pattern (choreography-based, coordinated through Apache Kafka events) to maintain data consistency.
- Wrote comprehensive unit and integration tests using JUnit achieving 82%+ code coverage; configured CI/CD pipelines for automated builds and containerized microservices with Kubernetes for deployment orchestration.
- Provisioned infrastructure on Microsoft Azure using Terraform for repeatable, version-controlled resource creation; monitored production services using Dynatrace for APM, Grafana for metrics dashboards, and Splunk for centralized log aggregation, coordinating with QA and stakeholders through Jira.

Environment: *Java 17, Spring Boot, Spring MVC, Spring Security, Spring Cloud, JPA, RESTful APIs, Apache Kafka, React, TypeScript, HTML, Tailwind CSS, JavaScript, Resilience4j, MySQL, Redis, JWT, OAuth 2.0, Microsoft Azure, Kubernetes, Terraform, CI/CD, JUnit, Dynatrace, Grafana, Splunk, Jira, Git.*

Application Developer | ***CBRE*** *Aug 2023 – July 2024*

- Developed enterprise Java applications using Java 11, Spring Boot, and Hibernate with JPA designed and implemented 30+ RESTful APIs and microservices integrated with MongoDB for high-volume operational and transaction data, enforcing OAuth 2.0 security policies across integrated systems.
- Built high-volume batch-processing jobs using Spring Batch for daily reconciliation, data aggregation, and reporting workflows processed millions of records with chunk-based processing, retry logic, and job monitoring.
- Built responsive front-end features using React, TypeScript, HTML, and JavaScript integrated with backend RESTful services and implemented dynamic dashboards, form validation, and role-based navigation.
- Wrote 500+ automated unit and integration tests using JUnit, achieving a 40% reduction in manual verification effort; wrote optimized MongoDB queries and aggregation pipelines that reduced report generation time by 35%.
- Provisioned infrastructure on AWS using Terraform for repeatable resource creation; containerized microservices with Kubernetes and deployed to AWS EC2 with static assets and file uploads stored on AWS S3 through automated CI/CD pipelines.
- Monitored production services using Dynatrace for application performance, Grafana for live metrics dashboards, AWS CloudWatch for log aggregation and alerting, and ELK Stack for centralized log analysis; coordinated cross-functional deliveries through Jira for sprint tracking and defect management.

Environment: *Java 11, Spring Boot, Hibernate, JPA, Spring Batch, RESTful APIs, React, TypeScript, HTML, JavaScript, MongoDB, OAuth 2.0, AWS EC2, S3, CloudWatch, Kubernetes, Terraform, CI/CD, JUnit, Dynatrace, Grafana, ELK Stack, Jira, Git.*

Software Developer | ***Deloitte*** *May 2022 – July 2023*

- Developed and integrated RESTful APIs using Java 8, Spring Boot, and Hibernate with JPA to unify data access for a payment platform serving 90M+ users; built database access layers against Oracle DB with optimized queries, views, and stored procedures.
- Led database performance tuning and server migrations on Oracle DB wrote and optimized SQL scripts, procedures, and reporting views; implemented Redis caching layers to improve response time by 40% on high-read endpoints.
- Contributed to front-end development using HTML and JavaScript for internal reporting interfaces; participated in Agile ceremonies and used Jira for task tracking, sprint planning, and cross-functional coordination in a client-facing consulting environment.
- Wrote unit and integration tests using JUnit and Mockito, raising test coverage to 80%+; configured CI/CD pipelines for automated builds, tests, and deployments across staging and production environments.
- Deployed backend services to AWS EC2 with backup workflows on AWS S3; monitored production systems using AWS CloudWatch for logs and metrics, Grafana for dashboards, and ELK Stack for centralized log analysis and troubleshooting.

Environment: *Java 8, Spring Boot, Hibernate, JPA, RESTful APIs, HTML, JavaScript, Oracle DB, Redis, AWS EC2, S3, CloudWatch, CI/CD, JUnit, Mockito, Grafana, ELK Stack, Jira, Git, Linux.*

TECHNICAL SKILLS

- **Programming Languages:** Java 8/11/17, JavaScript, TypeScript, SQL, HTML.
- **Backend Frameworks & APIs:** Spring, Spring Boot, Spring MVC, Spring Security, Spring Cloud, Spring Batch, Resilience4j, Saga Pattern, Hibernate, JPA, RESTful APIs, Multithreading, Microservices, Event-Driven Kafka, JWT, OAuth 2.0.
- **Frontend:** React, TypeScript, HTML, Tailwind CSS, JavaScript, Responsive Design.
- **Databases & Caching:** SQL Server, MySQL, Oracle DB, MongoDB, Redis.
- **Messaging:** Apache Kafka.
- **Cloud & DevOps:** AWS (EC2, S3, CloudWatch), Microsoft Azure, Kubernetes, Terraform, CI/CD Pipelines.
- **Monitoring & Observability:** Dynatrace, Grafana, Splunk, ELK Stack, AWS CloudWatch.
- **Testing:** JUnit, Mockito
- **Tools & Collaboration:** Jira, Git, Maven, Agile / Scrum.

EDUCATION

University of Central Missouri, Lee's Summit, MO *Aug 2024 – Dec 2025*
M.S.E in Computer Science Engineering

GITAM University, Rudraram, Telangana, India *June 2020 – June 2024*
B.S.E in Electronics and Communications Engineering (AI/ML)
